
	<h2 style="margin: 0;">Donor Questionnaire Part 1</h2> <p style="margin: 0;">(donor suitability)</p>	
---	--	---

Date:

Dear donor!

Thank you for applying to Berliner Samenbank GmbH as a sperm donor. We kindly ask you to answer the following questions truthfully or to the best of your knowledge. If you answer individual questions with "yes", this will not lead to exclusion. If necessary, we will carry out additional examinations if you are suitable.

Information about yourself	Donor ID (Awarded by the BSB):
Year of birth:	Origin / Descent:
Hair color: Hair texture (straight/wavy/curly):	Eye color: Glasses: Diopter Left: Right:
Height: Weight:	Marital status:

Hereditary muscle disease:	Miscarriages or stillbirth:
Have you heard about the Sperm Donor Registry Act (SaRegG)? <input type="radio"/> Yes <input type="radio"/> No	
What are your reasons to donate sperm?	

Donor ID (Awarded by the BSB):

I hereby state that the given information is correct.		
Signature (donor)		
I consent to the storage of my personal data in accordance with EU-DSGVO. A copy of my passport / ID card may remain in my file for the purpose of establishing my identity at follow-up appointments and to exclude any risk of confusion that could lead to serious consequences in the context of our services (Art. 6 para. 1 DSGVO).		
Date:	Signature (physician acc §8d TPG)	Signature (donor)
I agree with the analysis of my sperm sample: The sample will be discarded after the analysis.		
	Yes <input type="radio"/>	No <input type="radio"/>
I agree with the anonymous usage of my data for scientific purposes:		
	Yes <input type="radio"/>	No <input type="radio"/>

What happens next?

Since the sperm must still meet an extremely high quality standard even after the freeze-thaw process, unfortunately only 5-8% of applicants are suitable as donors.

If your sample donation is suitable, this is followed by a blood sample and a urine sample to rule out infection. If these values are also in order, the contract can be concluded at a further appointment. The sperm donor contract clarifies the donor's legal status and regulates sperm donation, health checks and remuneration. After successful conclusion of the contract, regular donation activity begins.

Donation activity often takes place over 1-2 years up to 1-2 times a week. Please note that a sexual abstinence of 3-5 days must be observed for each donation (i.e. the last ejaculation must have occurred 3-5 days before), a urine sample from first-stream urine must be given before each donation and a blood sample must be taken after each donation.

After the sample donation, please inquire about today's results by phone (030 301 88 83), quoting your donor number.

We keep our fingers crossed for you and for us!!!!
